Detects the fre immediately sound the alarm, sending a signal to the cloud and notifying emergency service

fire detection system can limit the emission of toxic products created by combusion

Detecting a fire qiuckly and accuratly

What do they
THINK AND FEEL?

what really counts major preoccupation worries & aspiration

Is the outcome accurate

Automated

early fire

detection

protecting the

global

environment

Sensor analyzes the data it collects right there on a spot

What do they SEE?

> environment friends

Natural resourses can definitely saved

what the market offers

What do they HEAR?

what friends say what boss say what influencers say

I think it may be expensive

Three types of alarm monitoring systems are used ionization, photoelecric and combination

> **Detection of the fre** conditions,two analytical methods are used namely, threshold ratio analysis and analsis using a machine learning algorithm

What do they SAY AND DO?

> attitude in public appearance behavior towards others

Radio acoustic sounding systems with fne space, time resolution capablities for monitoring is proposed

Can i predict the forest fre

Applying the machine learning techniques to fre detection systems has many limitations

Limited amount of energy ,the energy reqiured for the data processing

PAIN

can this product work in all situations

K means clustering algorithm characterized by high stabilization and versatility

GAIN

"wants" / needs measures of success

prediction is accurte

Improve the fre detection in real time and accurate
